[Physiotherapy with rotating pulse magnetic field in combined therapy of chronic obstructive pulmonary disease]

[Article in Russian]

[Lobanov AIu](#), [Gilinskaia NIu](#), [Chereiskaia NK](#).

Rationale and technique are proposed and clinical trial has been made of efficacy of chronic obstructive pulmonary disease (COPD) treatment with impacts of rotating impulse magnetic field (RIMF) from the device Polyus-VIEM (two fields, induction 48-72 mTe, reversive rotation, 4-6 s reversion duration, 20-30 Hz, 7-10 min exposure of each field, 7-10 procedures). The addition of RIMF in combined treatment of COPD improves treatment and shortens its duration.
